# ROAD RECLAMATION AND SOIL STABILIZATION

**CONSTRUCTION EXPERIENCE WHERE IT COUNTS**

## Golden Triangle Construction

Provides full depth Road Reclamation for today's engineers with a cost effective recycling pavement as well as a predetermined amount of the underlying base are pulverized in place by self-propelled reclaiming machinery. The old road material is then shaped and compacted to create an upgraded, homogenous base for a new paving surface. Additives, like asphalt emulsion, calcium chloride, lime or cement can be blended into the base using the reclaiming machine's on-board metering and spray system. These stabilizing agents dramatically increase the road base strength to provide greater load capacity.

- Cost Efficient
- High Quality base material
- No Cracking & Rutting
- Quick Construction Process
- Minimize traffic detour
